### ITS Remote Access Guide

This document will help you understand which remote access solution is required (if any) to access WCM applications or websites you may need.

Applications and resources are divided into eight common areas of interest and will detail which remote access solution is needed, if any. Possible options are:

- **Open** - no special software required
- **EZProxy** - visit through the [Library website](#) for seamless access
- **myApps** - visit [myApps to launch the application](#) remotely (VPN not needed)
- **Virtual Private Network (VPN)** - use [Cisco Secure Client](#) to join the campus network

Duo two-factor authentication will be required for most applications that require login with your WCM Center-Wide ID (CWID) and password. Duo is always needed for off-campus access to myApps and to access VPN.

If you need help with any remote access solutions, learn more here:
